

MEXICO: Scattered showers (15-60 mm) favored corn across most of the southern Plateau Corn Belt. However, portions of the central corn belt (Michoacan and Guanajuato) have missed the rain of the past few weeks. Scattered showers (10-60 mm) increased moisture supplies across northern Mexico, especially in the northeast (Tamaulipas). However, more rain is needed in Coahuila and Nuevo Leon. Light showers (less than 20 mm) prevailed across the Yucatan Peninsula, while heavier showers (25-100 mm) prevailed across southeastern Mexico (Tabasco, eastern Oaxaca, and Veracruz). Temperatures averaged 1 to 2 degrees C above normal across the main corn belt and the northeast, and near to below normal across north-central Mexico.
